DETAILED ACTION

Receipt is acknowledged of the following: Signed Declaration (1/10/00), Information Disclosure Statement (11/26/99), Filing Date Petition (12/13/99), and the Formal Drawings (6/22/00).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 14, and 19-21 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 5,516,524 to Kais *et al.* (hereinafter Kais). Kais teaches a pharmaceutical composition comprising doictyl sulfosuccinate (abstract). Specifically, Kais is relied upon for the teaching that double coatings are used for taste masking. Specifically, in column 11, example 6, Kais states that the objective is to eliminate the bitter taste of the drug by applying a double coating. In column 5, lines 55-60, Kais discloses that the composition can be coated with a single coating or multiple coatings, although double coating is preferred. Further, Kais teaches that the second coating can be chosen from pH sensitive polymers. Additionally, Kais states that it is preferable for the first and second coatings to be different, although the coatings can be from the

Application/Control Number: 09/449,851

Art Unit: 1615

same broad group of compositions, for instance both can be pH sensitive polymers. Kais further teaches Eudragit E as an example of a pH sensitive polymer which can be used in the second coating of this invention (c 5, I 60 and c 6, I 48). Applicant does not claim any specific coatings, however, in the examples applicant uses Eudragit E as the taste masking layer. Therefore, Kais's disclosure of Eudragit E reads on applicant's claims to insolubility in saliva at neutral pH and solubility in saliva at acidic pH's as well as solubility in the stomach. Kais's coating must have these same characteristics, as these traits are inherent to the material. Kais further teaches that the coating materials can be between1 and 50 weight percent of the composition (c 8, I 10-13).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kais as applied to claims 1-5, 14, and 19-21. Kais teaches applicant's double coating for the purpose of taste masking. Kais does not teach the specific weight percents or thicknesses of the coatings. However, it is the position of the examiner that these are limitations that would be routinely determined by one of ordinary skill in the art, through minimal experimentation, as being suitable, absent the presentation of some unusual and/ or unexpected results. The results must be those that accrue from the specific

Application/Control Number: 09/449,851

Art Unit: 1615

Page 4

limitations. Absent any evidence to the contrary, it is therefore the position of the examiner that the weight percents and thicknesses claimed by applicant do not change the function of the dual coating, and therefore do not merit patentable weight. One of ordinary skill in the art would have been motivated to make a dual coated particle with applicant's limitations, based on the teachings of Kais. One of ordinary skill in the art would expect a taste masked formulation regardless of specific percents and thicknesses. Therefore, this invention as a whole would have been *prima facie* obvious to one of ordinary skill in the art at the time the invention was made.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Amy E Pulliam whose telephone number is (703) 308-4710. The examiner can normally be reached on M-F 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thurman K Page can be reached on (703) 308-2927. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7922 for regular communications and (703) 308-7922 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1234.
